SOFTWARE ENGINEER

I'm a highly motivated Computer Science graduate with a solid foundation in Java, the MERN stack, and TypeScript. Although my professional experience is limited to a few freelance Shopify projects—one straightforward store for a wall panel company and a more complex build for a blood testing clinic—I quickly picked up Liquid and delivered successful results. I'm a quick learner, a tireless worker, and I'm ready to pour all my energy into growing my skills and making a real impact in any team I join.

EXPERIENCE

Freelance Web Developer

September 2024 - Present

Blood Test London (Blood Testing Clinic):

- Created an intuitive user flow—from selecting a test or package, to scheduling appointments, to processing payments—that dramatically reduced booking friction.
- Integrated responsive design principles and user-friendly navigation to accommodate both desktop and mobile visitors.
- Collaborated closely with the client to define requirements, gather feedback, and implement changes efficiently.
- Utilised creative problem-solving to overcome challenges in functionality, delivering a fully operational and user-friendly e-commerce platform within tight deadlines.

Design The Wall (Wall-Panel Company):

- Built a modern, visually engaging Shopify storefront focusing on bold design elements and dynamic responsiveness.
- Optimized images, layout, and load times for a smooth user experience across all devices.
- Communicated directly with the client to ensure the final product captured their design vision and targeted audience.

EDUCATION

BSc (Hons) Computer Science (2:1)

University of East London

BTEC Level 3 National Diploma in Engineering (D*D M)

The Warren School (Sixth Form)

TECHNICAL SKILLS

Java	Express
JavaScript	Node.js
TypeScript	MongoDB
HTML	PostgreSQL
CSS	Git/GitHub

SOFT SKILLS

Agile Learner
Adaptability and Flexibility
Dependability
Problem Solving
Critical Thinking
